(43) Date of printing by UK Office 27.10.1993

(21) Application No 9315049.8  
(22) Date of filing 17.06.1991  
(86) International application data  
PCT/US91/04292 En 17.06.1991  
(87) International publication data  
WO92/22875 En 23.12.1992

(71) Applicants  
Richard D Cramer III  
Tripos Associates Inc, 1699 S Hanley Road, Ste 33,  
St Louis, MO 63144, United States of America

Svante Wold  
371 Highland Avenue, Winchester, MA 01890,  
United States of America

(72) Inventors  
Richard D Cramer III  
Svante Wold

(74) Agent and/or Address for Service  
Brookes & Martin  
High Holborn House, 52-54 High Holborn, London,  
WC1V 6SE, United Kingdom

US 4461619 A

(58) Field of search by ISA  
INT CL<sup>5</sup> G06F 15/46  
US 364/496, 578

## (54) Comparative molecular field analysis (CoMFA)

(57) Comparative Molecular Field Analysis (CoMFA) is an effective computer implemented methodology (Fig. 5) of 3D-QSAR employing both interactive graphics and statistical techniques for correlating shapes of molecules with their observed biological properties. For each molecule of a series of known substrates the steric and electrostatic interaction energies with a test probe atom are calculated at spatial coordinates around the molecule. Subsequent analysis of the data table by a partial least squares (PLS) cross-validation technique (Fig. 8) yields a set of coefficients which reflect the relative contribution of the shape elements of the molecular series to differences in biological activities. Display (Fig. 3B) in three dimensions in an interactive graphics environment of the spatial volumes highly associated with biological activity and comparison with molecular structures yields an understanding of intermolecular associations. CoMFA will also predict the biological activity of new molecular species.
